# Assess
Smarter Automation Work with the Right Data

blueprint®

Your goal as an automation leader is simple: save your organization money. Automation solutions like UiPath, BluePrism, Automation Anywhere, and Power Automate are designed to lower costs by automating repetitive, manual work, however, **are they lowering costs as much as you think?**

When Automated Processes Cost More Than They Are Worth

Automated processes often cover hundreds of lines of code and can be difficult to decipher without the right help. This leads to lengthy ticket times when working on an existing automation, which can kill your ROI. Examples of excessive time spend on automations include:

| CHANGE REQUESTS | CREATING & GATHERING DOCUMENTATION FOR AUDIT REQUESTS | UPDATING DOCUMENTATION | AUTOMATION OUTAGES | ONBOARDING NEW DEVELOPERS TO MANAGE EXISTING AUTOMATIONS |

While we consider these items the cost of doing business, without the proper understanding and knowledge of the automation, your entire automation practice might be costing your business more than its saving.

The Solution

It's estimated that **30% of a developer's time is spent simply trying to understand what an automation is doing**. On top of that, for every week spent working on an automation, **a developer spends 1-2 days updating and creating process documentation**.

Blueprint *Assess* integrates seamlessly with your intelligent automation stack, allowing you to **create dynamic, editable, specification documents in seconds** whenever you need them. This AI-driven solution significantly lowers the time it takes to understand automations and enables you to create process specifications that never go out-of-date.

Assess
Smarter Automation Work with the Right Data

What is Blueprint *Assess*?

Assess is a cloud-based solution that seamlessly connects to your existing intelligent automation environment to turn automation code into detailed, readable specification data on-demand. Features include:

- Instantly generate detailed PDF or digital PDDs and SDDs
- Ability to edit data before export
- Leverage AI to create detailed specification documents and identify components that may impact security and compliance.
- Produce detailed specification data on applications used, potential reusable components, and potential risk areas
- Quickly render detailed & editable process diagrams, see custom actions, queues, external flows, solutions, & applications so you can understand & communicate what a bot is doing

Benefits include:

- Fix outages faster
- Expedite change requests
- Free up developer time
- Accelerate developer onboarding
- Lower number of escalated support tickets
- Easily calculate time savings
- Understand existing automations better and faster
- Retain knowledge instantly
- Eliminate the need to update documentation
- Reduce need to catalog and save documentation in a central location
- Produce updated documentation in seconds instead of days

Start realizing the true cost-saving potential of your automation program by eliminating hidden costs that sink your desired returns.
Reach out to Blueprint today for a personalized demo of how **Assess can be the automation ROI actualizer your business is missing**.
